To help you use this guide,

indicates a step in the process of searching and retrieving articles.
indicates a tip, or an extra piece of information.

August 2018
Introduction

This guide is designed to give you a brief overview of how to search any database via the EBSCOHost interface. Depending on the ATHENS/RAVEN password you are using, the range of databases will vary: University of Cambridge subscribe to a different set of databases via EBSCOHost compared with the NHS.

Access to PsycINFO via EBSCOHost for University of Cambridge users is achieved using a RAVEN username and password. Again, each institution has a different password, and you may be eligible for more than one: for example if you are studying part-time at University of Cambridge, but also working part-time at Addenbrooke’s, you would be eligible for a University RAVEN password and an NHS ATHENS password.

As a brief overview, this guide will help you learn the principles of how to search any database via EBSCOHost, regardless of which password you use to access it.

This guide will continue, assuming you are searching PsycINFO using a Cambridge University RAVEN login, but all of the instructions remain valid if you are searching CINAHL or HealthBusiness Elite.

How to access the EBSCOhost databases

<table>
<thead>
<tr>
<th>If you have a RAVEN login</th>
</tr>
</thead>
<tbody>
<tr>
<td>Go to <a href="http://library.medschl.cam.ac.uk/">http://library.medschl.cam.ac.uk/</a> and click “Research Support” and “databases for literature searching” — scroll down to click PsycINFO “available using RAVEN”. Click PsycINFO, and log in with RAVEN if you are off campus.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>If you are using an NHS ATHENS login</th>
</tr>
</thead>
</table>
| Go to [https://openathens.nice.org.uk/Auth/Login](https://openathens.nice.org.uk/Auth/Login) - enter your NHS ATHENS username and password.  
Go to My Resources  
Select EBSCO databases from the list.  
Tick the database you want to search from the selection available (searching one database at a time will give the best results). |
The front page in PsycINFO will look like this:

Always pick "advanced search". It will make it easier to run a more thorough search. This will give you a set of search boxes, plus a "suggest subject terms" option.
Planning your search

Before starting your search you should ask questions of yourself such as:
- What are the keywords?
- Are there any other ways to spell the keywords?
- Are there any other words which mean the same thing (synonyms)?
- Are there any related keywords I want to include?
- What limits do I want to apply?

First you need to clarify the question you wish to answer, and the keywords you will search with.

In this guide we will search for papers that might answer the following question:

How effective is cognitive behaviour therapy for smoking cessation?

In this search there are 2 key terms:
- Cognitive behaviour therapy
- Smoking

It is important to consider other synonyms and spelling variations: **behaviour** will find a different set of results from **behavior**

<table>
<thead>
<tr>
<th>Boolean Logic</th>
</tr>
</thead>
<tbody>
<tr>
<td>OR will search for articles containing any of the terms we choose. Use OR to combine synonyms, alternative spellings or related items. AND will search for articles which contain all of the terms we have chosen.</td>
</tr>
</tbody>
</table>

This means that the strategy might look like this:

```
cognitive behaviour therapy OR cognitive behavior therapy
AND
smoking OR smoke OR smoker OR tobacco
```

<table>
<thead>
<tr>
<th>Phrase Searching:</th>
</tr>
</thead>
<tbody>
<tr>
<td>If you want to search for a distinct phrase put it in quotation marks e.g. “healthcare worker”. This will instruct the database to find only those words next to each other in that order. Otherwise the search will be e.g. healthcare AND worker.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Truncation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Adding an * at the end of the word ensures the database also finds plurals and variations in word ending. For example, worker* will find both worker and workers.</td>
</tr>
</tbody>
</table>
**Synonyms**
Always remember that the computer is a machine — it will search for the words you type in.
It will not automatically find articles talking about tobacco or cigarettes just because you search for smoking — even if those connections seem obvious to you.

Our strategy can be amended:

"cognitive behaviour therapy" OR "cognitive behavior therapy"
OR CBT OR "cognitive therapy"
AND
smok* OR tobacco

Use the boxes in the advanced search option to search for the variations around your first keywords, and click Search. Ensure you are linking the different terms with OR

You can add extra boxes by clicking 🔄 🔄

---

**Why can't we enter the whole question at once?**
It is tempting to put the whole search into the search box in one go. **Don’t!!**
- It is better to search in stages, searching only for related terms.
- Searching in stages is better because some databases will treat a string of words as one phrase, so you may find nothing or very little.
- Searching in stages allows you to build up a much more complex and specific search.
- Searching in stages makes it easier to correct mistakes.

Clear the search fields, and type in your second search term: smok* and tobacco in the search boxes, remembering to link them with OR
The number of hits you get for each line of your search might feel overwhelming, but the number of hits you get when you combine the two lines using AND will reduce the hits to a more manageable number.

Click "Search History" to see all the terms you've searched for so far.

Combining your search terms
We need to link the two lines of your search — to retrieve papers that are talking about both cognitive behaviour therapy AND also smoking.

Clear the search box.
Tick line S1 and also S2, and "Search with AND"

You can now view results. The number of hits is now much more realistic, but you may still want to refine the search further.
Limiting / refining your search

When you look at the results of your search, there is a panel on the left of the screen which will allow you to refine your search.

Perhaps you only want articles in English, or published in the last 10 years? The toolbar on the left will allow you to make these refinements.

Make your selection from the choices available, and update to apply the limits to your search.

When you refine your search the result will go into your Search History. This means that you will always be able to revert back to the original set of hits if you feel you have made too many refinements, or want to search differently.
Viewing your results

Looking at the results of your search

PsycINFO shows us a summary record, giving details of title, authors, source (i.e. journal title, year, month, volume, part and pages), and the first few words of the abstract.

Click on the title to view the full amount of information held. This includes the abstract, keywords, and an option to “find similar results” (an easy way to find more relevant articles).
You can print, email or export the reference at this stage, by using the options on the right, but it might be more useful to "Add to folder". This option will let you gather up all the references you find useful, and then do something with all of these references in one batch, rather than individually — a more efficient way of working.

To go back to viewing the whole list of results click "result list" (above the title of the paper).

You can also preview the abstract and add to folder from the results list: just click the icon to preview the abstract, and to add the article to the folder.
When you have put a reference in the "folder" you will be reminded of this in the results list.

Preferences

The default view is that the results are presented by "relevance". If you prefer a more objective presentation you can opt to view in date order.

You can also choose to view up to 50 articles per page, and make other viewing choices from the page options available.
In the share menu, you can choose to add the results from the current page or all the results of this search to the folder.

You can create a search alert for the current search from this page.

The Permalink can be used to access the results of the search later or can be sent to others.

Export results sends you an email, which comes with a link allowing you to download a zip file of the results.
Access to Full-Text Articles

You may notice the "ejournals@cambridge - check for full text availability. A new window will open" button on the articles.

This will allow you to check whether the Library subscribes to the journal that you need.

Click on the "ejournals@cambridge" button on a paper. If the article is available online, you'll see a new window open with this sort of message:

Click on the "Full Text available at link" the full text of the article should open if it is available.

By no means all articles will be available in electronic format. But the Medical Library may be able to order articles for you via interlibrary loan. Alternatively, you may have additional access to ejournal via NHS ATHENS or other logins.

Some papers may give you access to the PDF immediately:

- Objectives: We evaluated smoking-cessation efficacy of an extended course of sustained-release bupropion (bupropion SR) and cognitive-behavioral treatment (CBT). Methods: Participants who smoked...
- Subjects: Bupropion, Cognitive Behavior Therapy, Drug Therapy, Smoking Cessation, Tobacco Smoking, Adulthood (18 yrs. & older), Male, Female
- Cited References: (21) Times Cited in this Database: (1)
Selecting references to save/print/email

While you can print or email or export the references one at a time when you click the title to read the abstract, it might be more efficient to "Add to folder".

This option will let you gather up all the references you find useful, and then do something with all of these references in one batch, rather than individually — a more efficient way of working.

Once you’ve added all the articles that you want to the folder, scroll up to the top of the page to open the folder.

In the folder, you can select all the articles, and send them to print or email, or export them to a reference management tool.
1. Addressing weight gain in smoking cessation treatment: A randomized controlled trial.

Bush, Terry; Levine, Michele D.; Bibe, Laura A.; Cardi, Barbara; DePree, Mona; McKee, Tim; Breslau, Lindsay; Zaks, Susan. American Journal of Health Promotion, Vol 27(2), New Dec, 2012, pp. 94-102. [Journal Article, Database: PsycINFO]

Purpose: To evaluate the effectiveness of a cognitive behavioral treatment (CBT) addressing cessation-related weight concerns delivered via a tobacco outline that does not address weight concerns...

Subjects: Cognitive Behavior Therapy; Smoking Cessation; Treatment Effectiveness Evaluation; Weight Gain; Abstinence (18 yrs & Older); Male; Female...
Saving your Search Strategy and Alerts

In the Search History view, there is an option to save your search history. It is necessary to create an additional username and password, but the advantage of saving your search history is that you can:

- run your strategy again at a future date, perhaps amending it
- set up regular emails alerting you to new articles of interest.
Once you have registered and logged in, you can
- give your search a name
- save it permanently
- set up an email alert.

If you chose to set up an email alert you will have more choices.
**Suggest Subject Terms** — how to make your search more comprehensive

**TIP: WHAT ARE SUBJECT TERMS?**

Subject Terms are a list of words and phrases that are used to index references in databases such as PsycINFO.

They provide a consistent term to identify all the papers talking about a particular topic, rather than just the papers that use the keywords you know about.

In this way, a Subject Term search might get more hits than a "freetext" search — because there are lots of ways of talking about a topic. The result is a more **sensitive** search. The opposite also occurs sometimes — a subject term search retrieves fewer hits than a freetext search. The hits you retrieve with the subject term search will be more **specific**.

Subject headings are arranged in a hierarchy like a family tree — so that there are some **broader** terms (i.e. general — such as respiratory disorder), and some **narrower** ones which lie beneath the broader terms (i.e. more specific — such as asthma).

You may have heard about MeSH (Medical Subject Headings) in relation to Medline/Pubmed searches. Other databases, including PsycINFO, use a similar system.

Type in a keyword from your search, and click the "suggest subject terms" box, and "search".

The database will try to match your term against the controlled vocabulary in the Thesaurus. If it can find an exact match, great, but sometimes it will try to suggest terms that you may find relevant.
If you can find a match, click the term itself to find out more.

You can read:
- a definition,
- information about when the term was introduced as a Subject Term,
- options to choose a broader term
- or a narrower term.

If you decide that this term is the right one for your search, you should tick either the “explode” or “major concept” box.

**Explode and Major Concept**

If you **explode** you will include any terms that are **narrower** — any more specific terms.

In this example, if you "explode" cognitive behavior therapy, the search results will include papers that are talking particularly about Acceptance and Commitment Therapy. This will increase the number of hits you retrieve.

If you pick a very broad term, using the **explode** option will significantly increase the number of hits.
If you tick the major concept option, your search will retrieve only those papers for which this is the main topic — so you will retrieve very much fewer hits, and might miss some relevant papers.

It is generally better to tick explode, and to have a larger number of hits, since you can use the search history to combine different search terms to get the best strategy, and so the best selection of papers to choose from.

Tick the “explode” option for cognitive behavior therapy, and click “add”. You’ll see the subject terms in the search box.

Click Search to add this to your search history, and to be able to incorporate it into your search strategy.

In this example, the subject term gets fewer hits than the freetext search — but the hits will be more specific i.e. more relevant. Combine the line with the subject terms with other lines in your strategy as instructed in this guide.
