1 Do we have the journal at all?

1.1 Check [iDiscover](#)

iDiscover searches all the journals accessible either in print or online via University of Cambridge subscriptions. If it's not listed in iDiscover, and if the researcher has not made the article available open access, you will not be able to read it for free online. If you have identified an article through another search engine (e.g. Google Scholar or Pubmed) but can't seem to read it freely online, iDiscover should be your first port of call, as it will save you a lot of time.

University of Cambridge staff and students can access the articles you find in iDiscover off campus if you log in with Raven. NHS staff will only be able to access this material when using a Medical Library computer.

1.2 Check [NHS Knowledge Hub](#)

If you have an Athens login, you can check the NHS Knowledge Hub. The Hub is a simple search platform for all journals, books, and other resources available to NHS staff (and students on placement) in England.

Please note that although the Medical Library administers your Athens account, the library is not responsible for the choice of journals that Athens subscribes to — this choice is made by your Trust.

2 Use a browser extension to minimise the number clicks between finding an article and accessing it in full

[Lean Library](#) or [LibKey](#) are integrated with the University's journal subscriptions, and will highlight open access articles as well.

[Endnote Click](#), [Unpaywall](#), or [Core Discovery](#) work in a similar way, and will highlight open access versions of articles in your search results.

3 Connect your reference manager

Use this option to connect Endnote so it knows you're at Cambridge. Endnote has an automated option to find full text (see our Endnote Top Tips guide for more details) and when connected to Cambridge, will work better and find more PDFs for you.

These are the instructions:

EndNote Preferences

The Find Full Text feature uses several technologies to maximize the chances that EndNote will find all available PDFs. Use this screen to control these full text search options:

- Web of Science Full Text Links
- DOI (Digital Object Identifier)
- PubMed LinkOut (U.S. National Library of Medicine)
- OpenURL

OpenURL Path:

Authenticate with:

URL:

Examples: <https://login.ezproxy.library.myuniversity.edu/login>
<http://auth.universityname.edu/authentication>

- Automatically invoke Find Full Text on newly-imported references

EndNote Defaults Revert Panel **OK** Cancel Apply

There are not currently any similar options available for other reference management software.

4 Does Google Scholar know you're at Cambridge?

Use this option as part of your normal, day to day searching

- How?

When you use Google Scholar, ensure the settings are maximised to find Cambridge full text wherever you're working: go to Settings, then click 'Library Links' and update it so that University of Cambridge is selected. When you search, you will then see 'ejournals@cam — full text' next to each search result.

Google

Scholar Settings

Search results Languages Library links Account Button

Show library access links for (choose up to five libraries):

e.g.; Harvard

University of Cambridge - ejournals@cam - full text
 University of Cambridge - ejournals@cambridge

Online access to library subscriptions is usually restricted to patrons of that library. You may need to login with your library password, use a campus computer, or configure your browser to use a library proxy. Please visit your library's website or ask a local librarian for assistance.

Save Cancel

5 Link smarter on Pubmed

<http://tinyurl.com/campubmed> has an extra button for every paper, so you can check if Cambridge provides access that is different to the publisher access suggested by Pubmed.
